Round Robin Task

Instructions

- You will be assigned into groups of 3-4 and completing a coding activity where each person is going to take turns typing up code.

  - You will be randomly put into a breakout room.

  - One person in each breakout room creates a group for the task on repl.it, and the rest join that group.

- A list of tasks is given on the repl.it task (one task per number). Each person does one task before handing it over to the next person. Make sure everyone has a turn before someone gets a second turn.

- While the selected person is typing, others are not allowed to tell them what to do unless specifically prompted for help.

- Feel free to discuss how to do a task with your group mates beforehand.

- When you're typing, make minimal edits to the code of the people before you!
